DETAILED ACTION

Specification

1. The disclosure is objected to under 37 CFR 1.71, as being so incomprehensible as to preclude a reasonable search of the prior art by the examiner. For example, the following items are not understood: on p. 1, l. 9, "secured to this lines" is believed to be an error for -- is secured to it and lines --.

Applicant is required: 1) to submit an amendment which clarifies the disclosure so that the examiner may make a proper comparison of the invention with the prior art; 2) to thoroughly check the specification for possible repeated similar or identical errors.

Applicant should be careful not to introduce any new matter into the disclosure (i.e., matter which is not supported by the disclosure as originally filed).

2. Claims 3, 5, 6, 7, 18, 20 are objected to because of the following informalities: the limitation "spacing" is not defined and could not be understood neither from the drawings nor from the description. Note that the claimed "spacing" must also be amended to claim an axial spacing, to define over the radial spacing 28 of Kelm 5628694 applied in the rejections below. Appropriate correction is required.

Drawings

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "spacing" as per item 2 above must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being incomprehensible. In claim 1, ll. 3-4, the following limitations are incomprehensible: 1) "a lining element secured to this lines the annular combustion chamber", see item 1 above for a proposed possible interpretation of this limitation; 2) on ll. 6-7 "on a rear side facing

Art Unit: 3746

away from the combustor of two edge areas extending in the axial direction on the lining element".

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1, 2, 4, 10-17, 19 are rejected under 35 U.S.C. 102(b) as being anticipated by Kelm 4628694, that teaches the invention as claimed: a gas-turbine annular combustor (Fig. 1), having an outer bearing structure 20, and a plurality of lining elements shown in Fig 5, that have interlocking elements in form of L-shaped hooks 22 of identical width that are located at the edges and the mid section of the lining elements and facing away from the combustor, wherein the removal of the lining elements requires the axial motion of the lining element the entire length of the interlocking element.

Allowable Subject Matter

8. Claims 3, 5-9, 18, 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. In amending the claims, Applicant should ensure that the amended claims do not read on the X references cited in the search report EP 1 413 813, that are similar, but not identical, to the invention as disclosed.
